ICSD

Solid Surface Infection Control Sink

The ICSD infection control sink is made from anti-microbial solid surface. The bowl and skirt are molded in one piece, this means no dirt or bacteria will accumulate in seams.

The ICSD features a deep basin, high side-splashes, an 8" high back splash, and an offset drain to help prevent aerosolisation of waste content.

Anti-Microbial Agent

Our ICSD infection control sinks are manufactured with an anti-microbial agent that's present throughout the material. It is not a coating and will not rub off over time.

The agent uses silver ion technology to help prevent the growth of bacteria, mold and mildew.

The agent has been tested according to the JIS gy Z2801 and showed a decrease of microbial activity of 99.88%.

ICSS

Stainless Steel Infection Control Sink

The ICSS is a CSA Z8000 compliant infection control sink made from stainless steel protected with an anti-microbial coating.

The ICSS has minimal horizontal surfaces to help prevent water from puddling on the sink. It has a 10" deep basin, high side-splashes, an 8 5/8" high back splash, and an offset open waste to help prevent water from splashing into it.

Anti-Microbial Coating

Our ICSS infection control sinks are protected with an EPA, FDA and NSF51 approved coating. The coating is effective in reducing the growth of a broad spectrum of micro-organisms such as bacteria, yeasts and molds.

The coating has been tested according to the JIS Z2801 and showed a decrease of microbial activity between 99.4% and 99.99%.

Line IC01

Infection Control Faucet

FEATURES

- 3 types of removeable spout for minimal bacterial development
 - Stainless steel
 - Disposable
 - Filtered
- Hygiene: smooth interior reduces bacteria growth
- Flow rate is reduced if cold water fails
- Thermal shock without removing the lever or shutting off cold water supply
- Hygiene control lever can be activated with elbow without manual contact
- Laminar flow with all spouts

THE SPOUTS

Removeable stainless spout: can be autoclaved for internal disinfection

Disposable spout with smooth interior for reducing bacteria growth

Single use anti-legionella and all germ spout with tubular micro filtration and a 0.1µm nominal rated sterilising grade
