ANTI-LIGATURE COMBO SHOWER HEAD

The new LRSCOM anti-ligature shower head from AquaDesign combines an anti-ligature shower head with a removable handheld shower.

The LRSCOM is designed to work as a regular shower head most of the time. However when a patient requires assistance, a handheld shower can be inserted into the shower head. No need for expensive diverters or specialized ligature resistant handheld showers.

The LRSCOM was designed from the ground up with the patient and the caregiver in mind. The normalizing look makes it a logical choice for both regular and behavioral patient rooms.

Regular anti-ligature shower head

Attach the handheld with a simple quarter turn

Handheld shower for when you need it
